

% of pixels flagged in raw cutouts

Cross-Epoch Mask Matching (`coadd_matched`)

14 bad bits $\Rightarrow w = 0$

Kept bits $\Rightarrow w_k = 1/\check{V}_k$

Stack: $\sigma_C^2 = (\sum w_k)^{-1}$

Asymmetric Mask Hole Elimination:
If an optical spike or bad pixel is masked in Epoch 2, `coadd_matched` zeroes that band at (x, y) in Epoch 1 as well. This prevents missing-flux holes from impersonating real moving dipoles (e.g. TRAPPIST-1).
