

Empirical Null Test Finding:

Theoretical Gaussian predictions assume uncorrelated pixels. Real WCS reprojection correlates noise across ~ 1.5 pixels.

Measured False CANDIDATEs/field:

- At 5.0σ: 0.86 per field
- At 6.0σ: 0.48 per field (7 fields)
- Gaussian predicts: identical recall

5.0σ	6.0σ
0.86 / field	**0.48 / field**

Cuts false alarms by 44%
