SPHEREx Polar Orbit Geometry

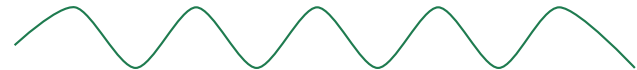

~20,800 Visits to Ecliptic Poles: Roll shifts band per visit.

Raw Photometry (Apparent variation driven by LVF roll angle)

Spectrum-Normalized: True Variable Isolated (Gaia DR3 confirmed)

NEP Validation (`spherexlens.deep`): Forced photometry across 78 visits divided by each star's median spectrum with a 3% systematic floor. Exactly 1 of 6 stars identified as variable — matching Gaia DR3's independent catalogued variable star with zero false alarms.
